Product information ALMEX station

Product description:

The *ALMEX station* is a state-of-the-art ticket vending machine that offers maximum safety due to its robust stainless steel housing. The machine enables barrier-free operation in accordance with TSI-PRM and can be equipped with two separate printer systems and up to eight paper rolls. An industrial PC forms the centerpiece of the system and guarantees reliable functionality. Due to the redundant coin processing system, service requirements are significantly reduced. A special module is available for cashless payment transactions, supplemented by an RFID reader, a chip card dispenser and a barcode reader.

The *ALMEX station* is fully modularly configurable.

The ticket vending machine display is available as a 15" or 32" touch display and enables intuitive operation. Optionally, a 15" display can be combined with a second 17" display to enable video assistance via the call center function. For this purpose, the *ALMEX station* is supplied with a video camera, speakers and a microphone. In addition, the machine is equipped with a top lighting unit featuring an optional passenger information display as well as LAN and mobile network communication.

Further information can be found on our website.
